

About me, Jacobo

Currently **studying** Information Management, graduate of Finance and Industrial Engineer. Knowledge applied in SQL databases (MySQL and PostgreSQL), creation of data visualization with Tableau. Professional **experience** in training projects, standardization of processes in software implementation (ERP) and participation in interdisciplinary teams of continuous improvement through a SCRUM framework. **Looking** for companies or social projects to create value through data analysis, implementation of software projects and financial evaluation of them. In courses of BigData and Qlik.

FAQs

Why did you study Industrial Engineering, Finance and Information Management?

The processes are made by activities. All the activities of a company or a Startup have a cost or income that could be evaluated. Everything I have written (activities, costs, income) are data that can be converted into information to communicate or create something new.
